- A brief explanation of the cost management features you found most interesting or useful:
- In trying to navigate through each of these Dashboards. I found that GCP was the easiest to set up as well as find things more easily. Azure seems to have more features but GCP seems more organized.
- GCP did allow me to set up a budget with alerts as Azure only let me set up a budget. Both did not give me any updates or information as I let them run for a day or two but I was able to experience how I could set those tools up if need be.
- What I liked most about Azure was that with all the features that it had, it did have a smaller search button which made it easier to find what I was looking for instead of opening up all the tabs. (I searched up 'budgets' and it immediately took me to that tab)
- As for Cost Analysis and Budget/Notification set up, GCP takes the win for me. GCP had a more visually pleasing graph set up as well as filters in viewing reports and cost breakdowns.
- I also noticed that both Azure and GCP had the option to save your reports if needed. Azure did offer more options to save as a PDF and CSV file under 'Cost' and 'Cost Analysis' while GCP had the options to save as a CSV file under 'Cost breakdown', 'Reports', and 'Billing Export'
